

LOOPD Container App with ProServ

[1] Ideally eReg is setup before starting with the app.

[2] Creation of the app and setup of the project internally.

[3] Delivering all information, explaining the client specific timeline and a 1 on 1 platform training.

[4] Once the app is ready it is advised the app is tested prior to making it available. Your Project Manager will also check the app for you.

[5] Once the app is ready you can put your event "Live" which will make it available in the LOOPD Container App. From now on you can start promoting your app.

[6] We recommend to have your app live at least 20 business days prior to the start of your event. This will give you enough time to promote your app.

[7] The client will be handed over to support prior to the start of his event. Support is available 24/7 and is internally informed of your event.
